

Recombinant Human MRPS2, His-tagged

Cat. No. MRPS2-2301H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human MRPS2 protein, fused to His-tag at N-terminus, was expressed in E.coli.
Species	Human
Source	E.coli
ProteinLength	319aa
Description	Mammalian mitochondrial ribosomal proteins are encoded by nuclear genes and help in protein synthesis within the mitochondrion. Mitochondrial ribosomes (mitoribosomes) consist of a small 28S subunit and a large 39S subunit. They have an estimated 75% protein to rRNA composition compared to prokaryotic ribosomes, where this ratio is reversed. Another difference between mammalian mitoribosomes and prokaryotic ribosomes is that the latter contain a 5S rRNA. MRPS2 is a 28S subunit protein that belongs to the ribosomal protein S2 family.
Form	Liquid. In 20mM Tris-HCl buffer (pH 8.0) containing 10% glycerol.
