

Recombinant Human ERCC2 Protein

Cat. No. ERCC2-13H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human ERCC2 Protein was expressed in E. coli.
Species	Human
Source	E.coli
Description	The nucleotide excision repair pathway is a mechanism to repair damage to DNA. The protein encoded by this gene is involved in transcription-coupled nucleotide excision repair and is an integral member of the basal transcription factor BTF2/TFIIH complex. The gene product has ATP-dependent DNA helicase activity and belongs to the RAD3/XPD subfamily of helicases. Defects in this gene can result in three different disorders, the cancer-prone syndrome xeroderma pigmentosum complementation group D, trichothiodystrophy, and Cockayne syndrome. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
