

Recombinant Human CYP2D6 Protein

Cat. No. CYP2D6-01H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Cytochrome P450 2D6 Human Recombinant (also called liver/kidney microsomal antigen 1) produced in SF9, is a glycosylated, polypeptide chain having a molecular mass of 60 kDa. The LKM1 is purified by proprietary chromatographic techniques.
Species	Human
Source	Sf9 Cells
Description	This gene encodes a member of the cytochrome P450 superfamily of enzymes. The cytochrome P450 proteins are monooxygenases which catalyze many reactions involved in drug metabolism and synthesis of cholesterol, steroids and other lipids. This protein localizes to the endoplasmic reticulum and is known to metabolize as many as 25% of commonly prescribed drugs. Its substrates include antidepressants, antipsychotics, analgesics and antitussives, beta adrenergic blocking agents, antiarrhythmics and antiemetics. The gene is highly polymorphic in the human population; certain alleles result in the poor metabolizer phenotype, characterized by a decreased ability to metabolize the enzyme's substrates. Some individuals with the poor metabolizer phenotype have no functional protein since they carry 2 null alleles whereas in other individuals the gene is absent. This gene can vary in copy number and individuals with the ultrarapid metabolizer phenotype can have 3 or more active copies of the gene. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
Form	LKM-1 is supplied in 17mM HEPES pH-7.5, 425mM NaCl, 1mM DTT, 1% Triton X-

	100 and 15% glycerol.
Molecular Mass	60 kDa
Purity	95%
Applications	Western-Blot with monoclonal anti-LKM-1 antibody and anti-LKM-1 autoantibody-positive sample.
Usage	For Research Use Only. The product may not be used as drugs, agricultural or pesticidal products, food additives or household chemicals.
Stability	Store at 4 centigrade if entire vial will be used within 2-4 weeks. Store, frozen at -20 centigrade for longer periods of time. Avoid multiple freeze-thaw cycles.
Concentration	0.35-0.6 g/ml
tmpcolum67	cytochrome P450 family 2 subfamily D member 6

GENE INFORMATION

Gene Name	CYP2D6 cytochrome P450 family 2 subfamily D member 6 [Homo sapiens (human)]
Official Symbol	CYP2D6
Synonyms	CPD6; CYP2D; CYP2DL1; CYPIID6; P450C2D; P450DB1; CYP2D7AP; CYP2D7BP; CYP2D7P2; CYP2D8P2; P450-DB1
Gene ID	1565
