

Recombinant Human PPBP Protein, Biotin-tagged

Cat. No. PPBP-33H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human PPBP Protein, fused to Biotin-tag, was expressed in E. coli.
Species	Human
Source	E.coli
ProteinLength	59-128 a.a.
Description	The protein encoded by this gene is a platelet-derived growth factor that belongs to the CXC chemokine family. This growth factor is a potent chemoattractant and activator of neutrophils. It has been shown to stimulate various cellular processes including DNA synthesis, mitosis, glycolysis, intracellular cAMP accumulation, prostaglandin E2 secretion, and synthesis of hyaluronic acid and sulfated glycosaminoglycan. It also stimulates the formation and secretion of plasminogen activator by synovial cells. The protein also is an antimicrobial protein with bactericidal and antifungal activity.
