

Recombinant Full Length Human CHKB Protein

Cat. No. CHKB-78HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human CHKL with a N terminal proprietary tag; Predicted MWt 69.52 kDa.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	395 amino acids
Description	Choline kinase (CK) and ethanolamine kinase (EK) catalyze the phosphorylation of choline/ethanolamine to phosphocholine/phosphoethanolamine. This is the first enzyme in the biosynthesis of phosphatidylcholine/phosphatidylethanolamine in all animal cells. The highly purified CKs from mammalian sources and their recombinant gene products have been shown to have EK activity also, indicating that both activities reside on the same protein. The choline kinase-like protein encoded by CHKL belongs to the choline/ethanolamine kinase family; however, its exact function is not known. Read-through transcripts are expressed from this locus that include exons from the downstream CPT1B locus.
