

Recombinant Full Length Human CXCR5 Protein

Cat. No. CXCR5-110HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human full-length CXCR5 protein was expressed in vitro wheat germ expression system.
Species	Human
Source	In Vitro Cell Free System
Description	This gene was identified as a gene specifically expressed in Burkitt's lymphoma and lymphatic tissues. The protein encoded by this gene is predicted to be a seven transmembrane G protein- coupled receptor and belongs to the CXC chemokine receptor family. BLC, a B-lymphocyte chemoattractant, was identified to be a specific ligand for this receptor. Studies of this gene and its mouse counterpart strongly suggest the essential function of this gene in B cell migration and localization within specific anatomic compartments, such as follicles in lymph nodes as well as in spleen. Two alternatively spliced variants of this gene exist.
