

Recombinant Full Length Human EML1 Protein

Cat. No. EML1-148HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human EML1 with N terminal proprietary tag; Predicted MW 115.76 kDa.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	815 amino acids
Description	Human echinoderm microtubule-associated protein-like is a strong candidate for the Usher syndrome type 1A gene. Usher syndromes (USHs) are a group of genetic disorders consisting of congenital deafness, retinitis pigmentosa, and vestibular dysfunction of variable onset and severity depending on the genetic type. The disease process in USHs involves the entire brain and is not limited to the posterior fossa or auditory and visual systems. The USHs are catagorized as type I (USH1A, USH1B, USH1C, USH1D, USH1E and USH1F), type II (USH2A and USH2B) and type III (USH3). The type I is the most severe form. Gene loci responsible for these three types are all mapped. Two transcript variants encoding different isoforms have been found for this gene.
Form	Liquid
Molecular Mass	115.760kDa inclusive of tags
AA Sequence	MEDGFSSYSSLYDTSSLLQFCNDDSAASSMEVTDRIAS LEQRVQMQEDDIQLLK

Purity

Proprietary Purification

Storage

Shipped on dry ice. Upon delivery aliquot and store at -80 centigrade. Avoid freeze / thaw cycles.

Storage Buffer

pH: 8.00. Constituents: 0.79% Tris HCl, 0.31% Glutathione.

GENE INFORMATION

Gene Name

EML1 echinoderm microtubule associated protein like 1 [Homo sapiens]

Official Symbol

EML1

Synonyms

EML1; echinoderm microtubule associated protein like 1; EMAPL; echinoderm microtubule-associated protein-like 1; ELP79; EMAP; HuEMAP
