

Recombinant Full Length Human GBE1 Protein

Cat. No. GBE1-187HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human GBE1 with a N terminal proprietary tag: predicted molecular weight 103.29 kDa.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	702 amino acids
Description	The protein encoded by this gene is a glycogen branching enzyme that catalyzes the transfer of alpha-1,4-linked glucosyl units from the outer end of a glycogen chain to an alpha-1,6 position on the same or a neighboring glycogen chain. Branching of the chains is essential to increase the solubility of the glycogen molecule and, consequently, in reducing the osmotic pressure within cells. Highest level of this enzyme are found in liver and muscle. Mutations in this gene are associated with glycogen storage disease IV (also known as Andersens disease).
Form	Liquid
