

Recombinant Full Length Human GIP Protein

Cat. No. GIP-198HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human GIP with a proprietary tag; Predicted MWt 42.9 kDa.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	153 amino acids
Description	This gene encodes an incretin hormone and belongs to the glucagon superfamily. The encoded protein is important in maintaining glucose homeostasis as it is a potent stimulator of insulin secretion from pancreatic beta-cells following food ingestion and nutrient absorption. This gene stimulates insulin secretion via its G protein-coupled receptor activation of adenylyl cyclase and other signal transduction pathways. It is a relatively poor inhibitor of gastric acid secretion.
