

Recombinant Full Length Human HEXB Protein

Cat. No. HEXB-228HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human HEXB with N-terminal proprietary tag. Predicted MW 87.23kDa.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	556 amino acids
Description	Hexosaminidase B is the beta subunit of the lysosomal enzyme beta-hexosaminidase that, together with the cofactor GM2 activator protein, catalyzes the degradation of the ganglioside GM2, and other molecules containing terminal N-acetyl hexosamines. Beta-hexosaminidase is composed of two subunits, alpha and beta, which are encoded by separate genes. Both beta-hexosaminidase alpha and beta subunits are members of family 20 of glycosyl hydrolases. Mutations in the alpha or beta subunit genes lead to an accumulation of GM2 ganglioside in neurons and neurodegenerative disorders termed the GM2 gangliosidosis. Beta subunit gene mutations lead to Sandhoff disease (GM2-gangliosidosis type II).
