

Recombinant Full Length Human ID4 Protein

Cat. No. ID4-248HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human ID4 with N terminal proprietary tag; Predicted MWt 43.78 kDa inclusive of tag.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	161 amino acids
Description	Transcription factors containing a basic helix-loop-helix (bHLH) motif regulate expression of tissue-specific genes in a number of mammalian and insect systems. DNA-binding activity of the bHLH proteins is dependent on formation of homo- and/or heterodimers. Dominant-negative HLH proteins encoded by Id-related genes, such as ID4, also contain the HLH-dimerization domain but lack the DNA-binding basic domain. Consequently, Id proteins inhibit binding to DNA and transcriptional transactivation by heterodimerization with bHLH proteins (Pagliuca et al.
