

Recombinant Full Length Human KRT6B Protein

Cat. No. KRT6B-268HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human KRT6B with N-terminal proprietary tag. Mol Wt 87.78 kDa inclusive of tag.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	564 amino acids
Description	The protein encoded by this gene is a member of the keratin gene family. The type II cytokeratins consist of basic or neutral proteins which are arranged in pairs of heterotypic keratin chains coexpressed during differentiation of simple and stratified epithelial tissues. As many as six of this type II cytokeratin (KRT6) have been identified; the multiplicity of the genes is attributed to successive gene duplication events. The genes are expressed with family members KRT16 and/or KRT17 in the filiform papillae of the tongue, the stratified epithelial lining of oral mucosa and esophagus, the outer root sheath of hair follicles, and the glandular epithelia. Mutations in these genes have been associated with pachyonychia congenita. The type II cytokeratins are clustered in a region of chromosome 12q12-q13.
