

Recombinant Full Length Human LEPR Protein

Cat. No. LEPR-283HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human LEPR full-length ORF (AAI60009.1) recombinant protein without tag.
Species	Human
Source	In Vitro Cell Free System
Description	The protein encoded by this gene belongs to the gp130 family of cytokine receptors that are known to stimulate gene transcription via activation of cytosolic STAT proteins. This protein is a receptor for leptin (an adipocyte-specific hormone that regulates body weight), and is involved in the regulation of fat metabolism, as well as in a novel hematopoietic pathway that is required for normal lymphopoiesis. Mutations in this gene have been associated with obesity and pituitary dysfunction. Alternatively spliced transcript variants encoding different isoforms have been described for this gene. It is noteworthy that this gene and LEPROT gene (GeneID:54741) share the same promoter and the first 2 exons, however, encode distinct proteins.
Form	Liquid
Molecular Mass	128.15 kDa

Storage Store at -80 centigrade. Aliquot to avoid repeated freezing and thawing.

Storage Buffer 25 mM Tris-HCl of pH8.0 containing 2% glycerol.

GENE INFORMATION

Gene Name **LEPR** leptin receptor [Homo sapiens (human)]

Official Symbol **LEPR**

Synonyms LEPR; OBR; OB-R; CD295; LEP-R; LEPRD; leptin receptor; huB219; OB receptor
