

Recombinant Full Length Human MCM6 Protein

Cat. No. MCM6-299HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human MCM6 (aa 1-821) with N-terminal proprietary tag, 116.38 kDa.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	821 amino acids
Description	The protein encoded by this gene is one of the highly conserved mini-chromosome maintenance proteins (MCM) that are essential for the initiation of eukaryotic genome replication. The hexameric protein complex formed by the MCM proteins is a key component of the pre-replication complex (pre_RC) and may be involved in the formation of replication forks and in the recruitment of other DNA replication related proteins. The MCM complex consisting of this protein and MCM2, 4 and 7 proteins possesses DNA helicase activity, and may act as a DNA unwinding enzyme. The phosphorylation of the complex by CDC2 kinase reduces the helicase activity, suggesting a role in the regulation of DNA replication.
