

Recombinant Full Length Human PARK2 Protein

Cat. No. PARK2-356HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human Parkin with N terminal proprietary tag; Predicted MWt 68.64 kDa.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	387 amino acids
Description	The precise function of this gene is unknown; however, the encoded protein is a component of a multiprotein E3 ubiquitin ligase complex that mediates the targeting of substrate proteins for proteasomal degradation. Mutations in this gene are known to cause Parkinson disease and autosomal recessive juvenile Parkinson disease. Alternative splicing of this gene produces multiple transcript variants encoding distinct isoforms. Additional splice variants of this gene have been described but currently lack transcript support.
Form	Liquid
