

Recombinant Full Length Human PLD2 Protein, GST-tagged

Cat. No. PLD2-383HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human PLD2(1 a.a. - 933 a.a.), fused with GST-tag at N-terminal, was expressed in wheat germ.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	933 amino acids
Description	The protein encoded by this gene catalyzes the hydrolysis of phosphatidylcholine to phosphatidic acid and choline. The activity of the encoded enzyme is enhanced by phosphatidylinositol 4,5-bisphosphate and ADP-ribosylation factor-1. This protein localizes to the peripheral membrane and may be involved in cytoskeletal organization, cell cycle control, transcriptional regulation, and/or regulated secretion. Two transcript variants encoding different isoforms have been found for this gene.
