

Recombinant Full Length Human PROM1 Protein

Cat. No. PROM1-399HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human PROM1 was expressed in wheat germ with proprietary liposome technology.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	865 amino acids
Description	This gene encodes a pentaspan transmembrane glycoprotein. The protein localizes to membrane protrusions and is often expressed on adult stem cells, where it is thought to function in maintaining stem cell properties by suppressing differentiation. Mutations in this gene have been shown to result in retinitis pigmentosa and Stargardt disease. Expression of this gene is also associated with several types of cancer. This gene is expressed from at least five alternative promoters that are expressed in a tissue-dependent manner. Multiple transcript variants encoding different isoforms have been found for this gene.

Purity	Proprietary Purification
Applications	Antibody Production; Functional Study; Compound Screening
Storage	Store at -80 centigrade. Aliquot to avoid repeated freezing and thawing.
Storage Buffer	25 mM Tris-HCl of pH8.0 containing 2% glycerol.
