

Recombinant Full Length Human PTPRO Protein

Cat. No. PTPRO-418HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human GLEPP1 according to AAH35960.1, with N-terminal proprietary tag. Mol Wt 91.78 kDa inclusive of tag.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	598 amino acids
Description	This gene encodes a member of the R3 subtype family of receptor-type protein tyrosine phosphatases. These proteins are localized to the apical surface of polarized cells and may have tissue-specific functions through activation of Src family kinases. This gene contains two distinct promoters, and alternatively spliced transcript variants encoding multiple isoforms have been observed. The encoded proteins may have multiple isoform-specific and tissue-specific functions, including the regulation of osteoclast production and activity, inhibition of cell proliferation and facilitation of apoptosis. This gene is a candidate tumor suppressor, and decreased expression of this gene has been observed in several types of cancer.
