

Recombinant Full Length Human RPS15 Protein

Cat. No. RPS15-442HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human RPS15 with N terminal proprietary tag; Predicted MWt 42.06 kDa.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	145 amino acids
Description	Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and a large 60S subunit. Together these subunits are composed of 4 RNA species and approximately 80 structurally distinct proteins. This gene encodes a ribosomal protein that is a component of the 40S subunit. The protein belongs to the S19P family of ribosomal proteins. It is located in the cytoplasm. This gene has been found to be activated in various tumors, such as insulinomas, esophageal cancers, and colon cancers. As is typical for genes encoding ribosomal proteins, there are multiple processed pseudogenes of this gene dispersed through the genome.
