

Recombinant Full Length Human SCP2 Protein

Cat. No. SCP2-459HF Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human Sterol carrier protein 2, isoform 2 with N-terminal proprietary tag. Predicted MW 41.84 kDa.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	143 amino acids
Description	This gene encodes two proteins: sterol carrier protein X (SCPx) and sterol carrier protein 2 (SCP2), as a result of transcription initiation from 2 independently regulated promoters. The transcript initiated from the proximal promoter encodes the longer SCPx protein, and the transcript initiated from the distal promoter encodes the shorter SCP2 protein, with the 2 proteins sharing a common C-terminus. Evidence suggests that the SCPx protein is a peroxisome-associated thiolase that is involved in the oxidation of branched chain fatty acids, while the SCP2 protein is thought to be an intracellular lipid transfer protein. This gene is highly expressed in organs involved in lipid metabolism, and may play a role in Zellweger syndrome, in which cells are deficient in peroxisomes and have impaired bile acid synthesis. Alternative splicing of this gene produces multiple transcript variants, some encoding different isoforms.
