

Recombinant Full Length Human SP2 Protein

Cat. No. SP2-489HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human SP2 transcription factor with N terminal proprietary tag; Predicted MW 53.46 kDa.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	249 amino acids
Description	This gene encodes a member of the Sp subfamily of Sp/XKLF transcription factors. Sp family proteins are sequence-specific DNA-binding proteins characterized by an amino-terminal trans-activation domain and three carboxy-terminal zinc finger motifs. This protein contains the least conserved DNA-binding domain within the Sp subfamily of proteins, and its DNA sequence specificity differs from the other Sp proteins. It localizes primarily within subnuclear foci associated with the nuclear matrix, and can activate or in some cases repress expression from different promoters.
