

Recombinant Full Length Human ST14 Protein

Cat. No. ST14-500HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human ST14 with N terminal proprietary tag; Predicted MWt 120.12 kDa.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	855 amino acids
Description	The protein encoded by this gene is an epithelial-derived, integral membrane serine protease. This protease forms a complex with the Kunitz-type serine protease inhibitor, HAI-1, and is found to be activated by sphingosine 1-phosphate. This protease has been shown to cleave and activate hepatocyte growth factor/scattering factor, and urokinase plasminogen activator, which suggest the function of this protease as an epithelial membrane activator for other proteases and latent growth factors. The expression of this protease has been associated with breast, colon, prostate, and ovarian tumors, which implicates its role in cancer invasion, and metastasis.
