

Recombinant Full Length Human UGT2B7 Protein, GST-tagged

Cat. No. UGT2B7-542HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human UGT2B7(1 a.a. - 529 a.a.), fused with GST-tag at N-terminal, was expressed in wheat germ.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	529 amino acids
Description	The protein encoded by this gene belongs to the UDP-glycosyltransferase (UGT) family. UGTs serve a major role in the conjugation and subsequent elimination of potentially toxic xenobiotics and endogenous compounds. This protein is localized in the microsome membrane, and has unique specificity for 3,4-catechol estrogens and estriol, suggesting that it may play an important role in regulating the level and activity of these potent estrogen metabolites.
