

Recombinant Full Length Human BTRC Protein, GST-tagged

Cat. No. BTRC-1687HF Lot. No. (See product label)

SPECIFICATION

Product Overview	Human BTRC full-length ORF (AAH27994.1, 1 a.a. - 605 a.a.) recombinant protein with GST-tag at N-terminal.

Description	This gene encodes a member of the F-box protein family which is characterized by an approximately 40 amino acid motif, the F-box. The F-box proteins constitute one of the four subunits of ubiquitin protein ligase complex called SCFs (SKP1-cullin-F-box), which function in phosphorylation-dependent ubiquitination. The F-box proteins are divided into 3 classes: Fbws containing WD-40 domains, Fbls containing leucine-rich repeats, and Fbxs containing either different protein-protein interaction modules or no recognizable motifs. The protein encoded by this gene belongs to the Fbws class; in addition to an F-box, this protein contains multiple WD-40 repeats. This protein is homologous to Xenopus bTrCP1, yeast Met30, Neurospora Scon2 and Drosophila Slimb proteins. It interacts with HIV-1 Vpu and connects CD4 to the proteolytic machinery. It also associates specifically with phosphorylated IκBα and beta-catenin destruction motifs, probably functioning in multiple transcriptional programs by activating the NF-κB pathway and inhibiting the beta-catenin pathway.
