

Recombinant Human ST6GALNAC2, His-tagged

Cat. No. ST6GALNAC2-195H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human ST6 Sialyltransferase 2/ST6GALNAC2 is produced by our mammalian expression system in human cells. The target protein is expressed with sequence (Met1-Arg374) of Human ST6GALNAC2 fused with a polyhistidine tag at the C-terminus.
Species	Human
Source	HEK293
ProteinLength	1-374 a.a.
Description	Alpha-N-Acetylgalactosaminide α -2,6-Sialyltransferase 2 (ST6GALNAC2) belongs to the glycosyltransferase 29 family that adds sialic acids to the non-reducing ends of glycoconjugates. At the cell surface, these modifications play roles in cell-cell and cell-substrate interactions, bacterial adhesion and protein targeting. ST6GALNAC2 is localized to the Golgi apparatus membrane. ST6GALNAC2 is highly expressed in lactating mammary glands and the adult testis; it is expressed at lower levels in the kidney. ST6GALNAC2 can catalyze 2,6-sialylation of the Tn antigen.
