

Active Recombinant Human JAK1, GST-tagged

Cat. No. JAK1-670H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human Jak1 (Janus kinase 1), also known as JTK3, GenBank Accession No. NM_002227, a.a. 866-1155(end) with N-terminal GST-Tag, MW= 59 kDa, expressed in Sf9 cells via a baculovirus expression system.
-------------------------	---

Species	Human
----------------	-------

Source	Sf9 Cells
---------------	-----------

ProteinLength	866-1155 a.a.
----------------------	---------------

Description	Janus kinase 1 (JAK1), is a member of a new class of protein-tyrosine kinases (PTK) characterized by the presence of a second phosphotransferase-related domain immediately N-terminal to the PTK domain. The second phosphotransferase domain bears all the hallmarks of a protein kinase, although its structure differs significantly from that of the PTK and threonine/serine kinase family members. JAK1 is a large, widely expressed membrane-associated phosphoprotein. JAK1 is involved in the interferon-alpha/beta and -gamma signal transduction pathways. The reciprocal interdependence between JAK1 and TYK2 activities in the interferon-alpha pathway, and between JAK1 and JAK2 in the interferon-gamma pathway, may reflect a requirement for these kinases in the correct assembly of interferon receptor complexes. These kinases couple cytokine ligand binding to tyrosine phosphorylation of various known signaling proteins and of a unique family of transcription factors termed the signal transducers and activators of transcription, or STATs.

 45-1 Ramsey Road, Shirley, NY 11967, USA

Form	40 mM Tris-HCl pH 8.0, 110 mM NaCl, 2.2 mM KCl, 3 mM DTT, 16 mM glutathione and 20% glycerol.
Bio-activity	1.0 pmole/min/μg. Enzyme reaction is conducted at 30°C for 1 hour in a buffer containing 50 mM HEPES (pH 7.5), 10 mM MgCl ₂ , 1 mM EGTA, 200 μM ATP, 0.01% Brij-35 and 2 μM substrate (Tyr6, Invitrogen) using Z-Lyte assay conditions.
Molecular Mass	59 kDa
Purity	≥ 35%
Applications	Useful for the study of enzyme kinetics, screening inhibitors, and selectivity profiling.
Stability	>6 months at –80°C

GENE INFORMATION

Gene Name	JAK1 Janus kinase 1 [Homo sapiens (human)]
Official Symbol	JAK1
Synonyms	JAK1; JTK3; JAK1A; JAK1B; Janus kinase 1; tyrosine-protein kinase JAK1; EC 2.7.10.2
Gene ID	3716
mRNA Refseq	NM_002227
Protein Refseq	NP_002218
MIM	147795

 Tel: 1-631-559-9269 1-516-512-3133

 Email: info@creative-biomart.com  Fax: 1-631-938-8127

 45-1 Ramsey Road, Shirley, NY 11967, USA

UniProt ID	P23458
Chromosome Location	1p32.3-p31.3
Pathway	Antiviral mechanism by IFN-stimulated genes; Cytokine Signaling in Immune system; Epstein-Barr virus infection
Function	ATP binding; growth hormone receptor binding; non-membrane spanning protein tyrosine kinase activity
