

Recombinant Full Length Human CD4 Protein

Cat. No. CD4-3182HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human CD4 full-length ORF (NP_000607.1) recombinant protein without tag.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	288 amino acids
Description	This gene encodes a membrane glycoprotein of T lymphocytes that interacts with major histocompatibility complex class II antigens and is also a receptor for the human immunodeficiency virus. This gene is expressed not only in T lymphocytes, but also in B cells, macrophages, and granulocytes. It is also expressed in specific regions of the brain. The protein functions to initiate or augment the early phase of T-cell activation, and may function as an important mediator of indirect neuronal damage in infectious and immune-mediated diseases of the central nervous system. Multiple alternatively spliced transcript variants encoding different isoforms have been identified in this gene. [provided by RefSeq, Aug 2010]
