

Recombinant Full Length Human HRH1 Protein

Cat. No. HRH1-3663HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human HRH1 full-length ORF (NP_000852.1) recombinant protein without tag.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	644 amino acids
Description	Histamine is a ubiquitous messenger molecule released from mast cells, enterochromaffin-like cells, and neurons. Its various actions are mediated by histamine receptors H1, H2, H3 and H4. This gene was thought to be intronless until recently. The protein encoded by this gene is an integral membrane protein and belongs to the G protein-coupled receptor superfamily. It mediates the contraction of smooth muscles, the increase in capillary permeability due to contraction of terminal venules, the release of catecholamine from adrenal medulla, and neurotransmission in the central nervous system. Multiple alternatively spliced variants, encoding the same protein, have been identified. [provided by RefSeq]
