

Recombinant Full Length Human MRVI1 Protein

Cat. No. MRVI1-6535HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human MRVI1 full-length ORF (ADR83074.1) recombinant protein without tag.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	187 amino acids
Description	This gene is similar to a putative mouse tumor suppressor gene (Mrvi1) that is frequently disrupted by mouse AIDS-related virus (MRV). The encoded protein, which is found in the membrane of the endoplasmic reticulum, is similar to Jaw1, a lymphoid-restricted protein whose expression is downregulated during lymphoid differentiation. Studies in mouse suggest that MRV integration at Mrvi1 induces myeloid leukemia by altering the expression of a gene important for myeloid cell growth and/or differentiation, and thus this gene may function as a myeloid leukemia tumor suppressor gene. Several alternatively spliced transcript variants encoding different isoforms have been found for this gene, few of which initiate translation at a non-AUG (CUG) start site. [provided by RefSeq]
Form	Liquid
Molecular Mass	65.7 kDa

Applications

Antibody Production
Functional Study
Compound Screening

Notes

Best use within three months from the date of receipt of this protein.

Storage

Store at -80 centigrade. Aliquot to avoid repeated freezing and thawing.

Storage Buffer

25 mM Tris-HCl of pH8.0 containing 2% glycerol.

GENE INFORMATION

Gene Name

MRVI1 murine retrovirus integration site 1 homolog [Homo sapiens]

Official Symbol

MRVI1

Synonyms

MRVI1; murine retrovirus integration site 1 homolog; protein MRVI1; inositol 1; 4; 5 triphosphate associated cGMP kinase substrate; IP3R associated cGMP kinase substrate; IRAG; JAW1L; JAW1-related protein MRVI1; IP3R-associated cGMP kinase substrate; inositol 1,4,5-triphosphate receptor-associated cGMP kinase substrate; inositol 1,4,5-trisphosphate receptor-associated cGMP kinase substrate;
