

Recombinant Full Length Human PMEL Protein, GST-tagged

Cat. No. PMEL-6849HF **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human SILV full-length ORF (NP_008859.1, 1 a.a. - 661 a.a.) recombinant protein with GST-tag at N-terminal was expressed in Wheat Germ.
Species	Human
Source	In Vitro Cell Free System
ProteinLength	661 amino acids
Description	This gene encodes a melanocyte-specific type I transmembrane glycoprotein. The encoded protein is enriched in melanosomes, which are the melanin-producing organelles in melanocytes, and plays an essential role in the structural organization of premelanosomes. This protein is involved in generating internal matrix fibers that define the transition from Stage I to Stage II melanosomes. This protein undergoes a complex pattern of posttranslational processing and modification that is essential to the proper functioning of the protein. A secreted form of this protein that is released by proteolytic ectodomain shedding may be used as a melanoma-specific serum marker. Alternate splicing results in multiple transcript variants.
Molecular Mass	96.7 kDa

RALDGGNKHFLRNQPLTFALQLHDPSGYLAEAD

Applications

Enzyme-linked Immunoabsorbent Assay
Western Blot (Recombinant protein)
Antibody Production
Protein Array

Storage

Store at -80 centigrade. Aliquot to avoid repeated freezing and thawing.

Storage Buffer

50 mM Tris-HCl, 10 mM reduced Glutathione, pH=8.0 in the elution buffer.

GENE INFORMATION

Gene Name

PMEL premelanosome protein [Homo sapiens (human)]

Official Symbol

PMEL

Synonyms

PMEL; premelanosome protein; P1; SI; SIL; ME20; P100; SILV; ME20M; gp100; ME20-M; PMEL17; D12S53E; melanocyte protein PMEL; melanocyte protein Pmel 17; melanocyte protein mel 17; melanocytes lineage-specific antigen GP100; melanoma-associated ME20 antigen; melanosomal matrix protein17; silver locus protein homolog; silver, mouse, homolog of
