

Active Recombinant Human CUL5/RBX2 Complex Protein, His-Tagged

Cat. No. CUL5-02H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human CUL5/RBX2 Complex Protein, His-Tagged was expressed in sf21 cell
Species	Human
Source	Sf21 Cells
Description	Cullin-5 (CUL5) is a core component of multiple ECS (Elongin-CUL5-SOCS-box protein) E3 ubiquitin ligase complexes that mediate the ubiquitination of proteins involved in cytokine receptor signal transduction. In the ECS complex, CUL5 serves as a scaffold that organizes the Elongin B/Elongin C/SOCS (Suppressor of Cytokine Signaling) recognition subunits with the RBX subunit and contributes to catalysis through positioning of the substrate and an E2 ubiquitin-conjugating enzyme. In vivo, the E3 ubiquitin ligase activity of the ECS complex is dependent on neddylation of the cullin subunit, though neddylation may be dispensable for some in vitro reactions. This complex consists of an N-terminal 10-His tagged CUL5 (UniProt Q93034) and untagged RBX2 (UniProt Q9UBF6).
Bio-activity	Typical enzyme concentration to support in vitro conjugation will depend on experimental conditions.
Molecular Mass	94 kDa (CUL5), 13 kDa (RBX2)
Purity	>95%, by SDS-PAGE under reducing conditions and visualized by Colloidal
