

Recombinant Human GCG Protein, His-Tagged

Cat. No. GCG-01H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human GCG Protein, His-Tagged was expressed in E.coli cell
Species	Human
Source	E.coli
ProteinLength	90-180 aa
Description	The protein encoded by this gene is actually a preproprotein that is cleaved into four distinct mature peptides. One of these, glucagon, is a pancreatic hormone that counteracts the glucose-lowering action of insulin by stimulating glycogenolysis and gluconeogenesis. Glucagon is a ligand for a specific G-protein linked receptor whose signalling pathway controls cell proliferation. Two of the other peptides are secreted from gut endocrine cells and promote nutrient absorption through distinct mechanisms. Finally, the fourth peptide is similar to glicentin, an active enteroglucagon
