

Active Recombinant Human PDGFB Protein

Cat. No. PDGFB-224H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human PDGFB Protein without tag was expressed in E. coli.
Species	Human
Source	E.coli
Description	Platelet-derived growth factor (PDGF) is an important regulator of cell growth, proliferation, and angiogenesis. PDGF synthesis is induced by IL-1, IL-6, TNF- α , TGF- β , and EGF signaling. PDGF functions as a mitogenic growth hormone on cells of mesenchymal lineage, such as smooth muscle and glial cells. PDGF is also stored in the alpha-granules of platelets and is released upon adherence to traumatized tissues. PDGF is a dimeric glycoprotein formed by two A chains (AA), two B chains (BB), or as a heterodimer with an A and a B chain (AB). The PDGF dimer binds the cell surface receptor tyrosine kinases PDGFR- α and PDGFR- β .
Bio-activity	3T3 cell proliferation, ≤ 20 ng/mL; $\geq 5.0 \times 10^4$ units/mg
