SPECIFICATION

Product Overview	Recombinant Human BMP7 Protein without tag was expressed in Human cells. Animal Free and Xeno Free
Species	Human
Source	Human Cells
Description	Bone morphogenetic protein 7 (BMP-7), also known as osteogenic protein 1 (OP1) is a member of transforming growth factor β family that includes more than 20 structurally related bone growth factors. BMP-7 plays an important role in cartilage and bone formation. It also plays a role in calcium regulation and kidney development. Mature human BMP-7 is usually a homodimer consisting of two antiparallel monomers of 139 amino acids. Dimerization is facilitated by a disulfide bridge formed between the monomer, which contains three intrachain disulfide bridges arranged in a cysteine knot motif.
Bio-activity	The activity was measured by its ability to induce alkaline phosphatase production in the ATDC-5 cell line (Mouse chondrogenic cell line).
Molecular Mass	30-38 kDa
Endotoxin	<0.5 EU/ μ g
Purity	High Purity, >95% by SDS-PAGE
