

Recombinant DENV2 NS1 Protein, His-tagged

Cat. No. NS1-02V **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant DENV2 NS1 Protein with a C-terminal His-Tag was expressed in HEK293F.
Species	DENV2
Source	HEK293
Description	Dengue virus is common mosquito-borne infection and a major cause of morbidity in tropical and subtropical regions. There is currently no vaccine to prevent, or effective anti-viral drugs to treat, dengue virus infection. In many cases infection is asymptomatic and the majority of individuals who get ill only suffer the mild, non-specific febrile symptoms characteristic of dengue fever (DF). Only a minority of infections result in severe disease, manifesting as dengue hemorrhagic fever (DHF) or dengue shock syndrome (DSS). Dengue virus infection gives lifelong immunity to the serotype in question but subsequent infection with another serotype may increase the likelihood of severe disease.

GENE INFORMATION

Gene Name POLY polyprotein [Dengue virus 2]

Official Symbol POLY

Synonyms

POLY; polyprotein; polyprotein gene; polyprotein; anchored capsid protein ancC; capsid protein C; membrane glycoprotein precursor prM; membrane glycoprotein M; envelope protein E; nonstructural protein NS1; nonstructural protein NS2A; nonstructural protein NS2B; nonstructural protein NS3; nonstructural protein NS4A; protein 2K; nonstructural protein NS4B; RNA-dependent RNA polymerase NS5; protein pr; contains structural proteins, C-prM/M-E and non-structural proteins, NS1-NS2A/B-NS3-NS4A/B-NS5

Gene ID 1494449

Protein Refseq NP_056776

UniProt ID O09234
