

Recombinant Human FURIN Protein (AA 27-715), C-GFP/His-Tagged

Cat. No. FURIN-30H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human FURIN Protein (AA 27-715) with C-GFP/His tag was expressed in HEK293.
Species	Human
Source	HEK293
ProteinLength	AA 27-715
Description	This gene encodes a member of the subtilisin-like proprotein convertase family, which includes proteases that process protein and peptide precursors trafficking through regulated or constitutive branches of the secretory pathway. It encodes a type 1 membrane bound protease that is expressed in many tissues, including neuroendocrine, liver, gut, and brain. The encoded protein undergoes an initial autocatalytic processing event in the ER and then sorts to the trans-Golgi network through endosomes where a second autocatalytic event takes place and the catalytic activity is acquired. Like other members of this convertase family, the product of this gene specifically cleaves substrates at single or paired basic residues. Some of its substrates include parathyroid hormone, transforming growth factor beta 1 precursor, proalbumin, pro-beta-secretase, membrane type-1 matrix metalloproteinase, beta subunit of pro-nerve growth factor and von Willebrand factor. It is thought to be one of the proteases responsible for the activation of HIV envelope glycoproteins gp160 and gp140, and may play a role in tumor progression. Unlike

SARS-CoV and other coronaviruses, the spike protein of SARS-CoV-2 is thought to be uniquely cleaved by this protease. Alternative splicing results in multiple transcript variants.

Purity > 85% as determined by SDS-PAGE

Storage Stored and shipped at -80 centigrade

Storage Buffer PBS, pH 7.4

GENE INFORMATION

Gene Name **FURIN** furin (paired basic amino acid cleaving enzyme) [Homo sapiens]

Official Symbol **FURIN**
