

Recombinant Human CD59 Protein, C-His-tagged

Cat. No. CD59-202H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human CD59 Protein with C-His tag was expressed in E. coli.
Species	Human
Source	E.coli
Description	CD59 is a GPI-anchored membrane protein that functions as inhibitor of the complement membrane attack complex (MAC). CD59 binds to complement components C8 and C9, preventing C9 polymerization and insertion into membranes, therefore inhibiting the complement-dependent cytotoxicity (CDC). CD59 is a ubiquitously expressed cell membrane protein that protects cells from CDC. Rare cases of CD59 deficiency have been reported to cause paroxysmal nocturnal hemoglobinuria in human patients. Expression of CD59 on tumor cells and viral infected cells makes them resist antibody-dependent complement-mediated lysis. Potent inhibitors for CD59 have been actively pursued for therapeutic applications. In addition, CD59 may regulate insulin secretion by modulating exocytosis.
