

Recombinant Human KRAS, Isoform B, GDP-Loaded, N-His-tagged

Cat. No. KRAS-103H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human KRAS (KRAS proto-oncogene, GTPase), isoform b, encompassing amino acids 2-185. This construct contains an N-terminal His-tag (6×His). The recombinant protein was affinity purified and loaded with GDP. Unbound GDP was removed by spin column.
Species	Human
Source	Sf9 Cells
ProteinLength	2-186
Description	This gene, a Kirsten ras oncogene homolog from the mammalian ras gene family, encodes a protein that is a member of the small GTPase superfamily. A single amino acid substitution is responsible for an activating mutation. The transforming protein that results is implicated in various malignancies, including lung adenocarcinoma, mucinous adenoma, ductal carcinoma of the pancreas and colorectal carcinoma. Alternative splicing leads to variants encoding two isoforms that differ in the C-terminal region.
Form	Aqueous buffer solution
Molecular Mass	22 kDa
Purity	≥90%
