

# Recombinant Full Length Spermidine/Putrescine Transport System Permease Protein Potb(Potb) Protein, His-Tagged

**Cat. No.** RFL12953SF    **Lot. No.** (See product label)

## SPECIFICATION

|                         |                                                                                                                                                                                                                                                                                                                  |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Product Overview</b> | Recombinant Full Length Spermidine/putrescine transport system permease protein PotB(potB) Protein (P0A2J8) (1-287aa), fused to N-terminal His tag, was expressed in E. coli.                                                                                                                                    |
| <b>Species</b>          | Salmonella typhi                                                                                                                                                                                                                                                                                                 |
| <b>Source</b>           | E.coli                                                                                                                                                                                                                                                                                                           |
| <b>ProteinLength</b>    | Full Length (1-287)                                                                                                                                                                                                                                                                                              |
| <b>Form</b>             | Lyophilized powder                                                                                                                                                                                                                                                                                               |
| <b>AA Sequence</b>      | MKNTSKFQNVVIVTIVGWLVLVFLPNLMIIGTSFLTRDDASFVKMVFTLDNYARLLDP<br>L YFEVLLHSLNMALIALTLSCVLGYPPFAWFLAKLPEKIRPLLLFLLIVPFWTNSLIRIYGL<br>KIFLSTKGYLNEFLLWLGVIDTPIRIMFTPSAVIIGLVYILLPFMVMPLYSSIEKLDKPL L<br>EAARDLGASKMQTFIRIIPLTMPGIVAGCLLVMLPAMGLFYVSDLMGGAKNLLIGNVI<br>KVQFLNIRDWPFGAATSITLTIVMGLMLLIYWRASRLLNKKVSDISD |
| <b>Purity</b>           | Greater than 90% as determined by SDS-PAGE.                                                                                                                                                                                                                                                                      |
| <b>Notes</b>            | Repeated freezing and thawing is not recommended. Store working aliquots at 4°C for up to one week.                                                                                                                                                                                                              |
| <b>Storage</b>          | Store at -20°C/-80°C upon receipt, aliquoting is necessary for mutiple use. Avoid                                                                                                                                                                                                                                |

repeated freeze-thaw cycles.

**Storage Buffer**

Tris/PBS-based buffer, 6% Trehalose, pH 8.0

**Reconstitution**

We recommend that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Please reconstitute protein in deionized sterile water to a concentration of 0.1-1.0 mg/mL. We recommend to add 5-50% of glycerol (final concentration) and aliquot for long-term storage at -20°C/-80°C. Our default final concentration of glycerol is 50%. Customers could use it as reference.

**GENE INFORMATION****Gene Name**

potB

**Synonyms**

potB; STY1265; t1695; Spermidine/putrescine transport system permease protein  
PotB

**UniProt ID**

P0A2J8
