

Active Recombinant Human Adrenergic, Beta-1-, Receptor, Flag-His

Cat. No. ADRB1-1017H Lot. No. (See product label)

SPECIFICATION

Product Overview

Species	Human
Source	Sf9 Cells
Description	The human1-adrenoreceptor (1AR) is activated by the catecholamines epinephrine and norepinephrine and couples to the G-protein Gs to mediate adenylate cyclase activation. Theβ1AR exists as several polymorphic forms of which the Gly389 and Arg389 variants are among the best known. There is a controversy whether or not there are functional differences between the two β1AR polymorphisms. β1ARs are mainly found in the heart, kidney, and fat tissue. These receptors are involved in physiological processes such heart contraction, renin release and lipolysis. The protein contains a N-terminal FLAG-tag and a C- terminal his tag for immunological detection, to allow purification, and to provide additional protection against proteolysis.
Form	Membrane suspension. Supplied in 75 mM Tris-HCl Ph 7.4, 12.5 mM MgCl2 and 1Mm EDTA.
Activity	14 pmol/mg.
Usage	For in vitro use only.
