

Active Recombinant Full Length Human MAGEA4 Protein, C-Flag-tagged

Cat. No. MAGEA4-111HFL **Lot. No.** (See product label)

SPECIFICATION	
Product Overview	Recombinant Full Length Human MAGEA4 Protein, fused to Flag-tag at C-terminus, was expressed in Mammalian cells.
Species	Human
Source	Mammalian Cells
Description	This gene is a member of the MAGEA gene family. The members of this family encode proteins with 50 to 80% sequence identity to each other. The promoters and first exons of the MAGEA genes show considerable variability, suggesting that the existence of this gene family enables the same function to be expressed under different transcriptional controls. The MAGEA genes are clustered at chromosomal location Xq28. They have been implicated in some hereditary disorders, such as dyskeratosis congenita. Several variants encoding the same protein have been found for this gene.
