

Active Recombinant Full Length Human RRM1 Protein, C-Flag-tagged

Cat. No. RRM1-179HFL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Full Length Human RRM1 Protein, fused to Flag-tag at C-terminus, was expressed in Mammalian cells.
Species	Human
Source	Mammalian Cells
Description	This gene encodes the large and catalytic subunit of ribonucleotide reductase, an enzyme essential for the conversion of ribonucleotides into deoxyribonucleotides. A pool of available deoxyribonucleotides is important for DNA replication during S phase of the cell cycle as well as multiple DNA repair processes. Alternative splicing results in multiple transcript variants.
Form	25 mM Tris HCl, pH 7.3, 100 mM glycine, 10% glycerol.
Bio-activity	Binding assay
Molecular Mass	89.9 kDa

recombinant RRM1 and/or 1 ug RRM2 in the presence of 12.5 uM afatinib were incubated for one hour at 37 centigrade. The reaction product was examined by Coomassie blue G-250 staining and immunoblotting with anti-afatinib antiserum.

Coomassie blue staining of purified RRM1 protein.
