

Active Recombinant Full Length Human MARCKS Protein, C-Flag-tagged

Cat. No. MARCKS-395HFL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Full Length Human MARCKS Protein, fused to Flag-tag at C-terminus, was expressed in Mammalian cells.
Species	Human
Source	Mammalian Cells
Description	The protein encoded by this gene is a substrate for protein kinase C. It is localized to the plasma membrane and is an actin filament crosslinking protein. Phosphorylation by protein kinase C or binding to calcium-calmodulin inhibits its association with actin and with the plasma membrane, leading to its presence in the cytoplasm. The protein is thought to be involved in cell motility, phagocytosis, membrane trafficking and mitogenesis.
