

Active Recombinant Full Length Human NASP Protein, C-Flag-tagged

Cat. No. NASP-585HFL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Full Length Human NASP Protein, fused to Flag-tag at C-terminus, was expressed in Mammalian cells.
Species	Human
Source	Mammalian Cells
Description	This gene encodes a H1 histone binding protein that is involved in transporting histones into the nucleus of dividing cells. Multiple isoforms are encoded by transcript variants of this gene. The somatic form is expressed in all mitotic cells, is localized to the nucleus, and is coupled to the cell cycle. The testicular form is expressed in embryonic tissues, tumor cells, and the testis. In male germ cells, this protein is localized to the cytoplasm of primary spermatocytes, the nucleus of spermatids, and the periacrosomal region of mature spermatozoa.
Form	25 mM Tris HCl, pH 7.3, 100 mM glycine, 10% glycerol.
