

Recombinant Full Length Human MGMT Protein, C-Flag-tagged

Cat. No. MGMT-1344HFL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Full Length Human MGMT Protein, fused to Flag-tag at C-terminus, was expressed in Mammalian cells.
Species	Human
Source	Mammalian Cells
Description	Alkylating agents are potent carcinogens that can result in cell death, mutation and cancer. The protein encoded by this gene is a DNA repair protein that is involved in cellular defense against mutagenesis and toxicity from alkylating agents. The protein catalyzes transfer of methyl groups from O(6)-alkylguanine and other methylated moieties of the DNA to its own molecule, which repairs the toxic lesions. Methylation of the genes promoter has been associated with several cancer types, including colorectal cancer, lung cancer, lymphoma and glioblastoma.
Form	25 mM Tris HCl, pH 7.3, 100 mM glycine, 10% glycerol.
