

Recombinant Full Length Human INMT Protein, C-Flag-tagged

Cat. No. INMT-1894HFL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Full Length Human INMT Protein, fused to Flag-tag at C-terminus, was expressed in Mammalian cells.
Species	Human
Source	Mammalian Cells
Description	N-methylation of endogenous and xenobiotic compounds is a major method by which they are degraded. This gene encodes an enzyme that N-methylates indoles such as tryptamine. Alternative splicing results in multiple transcript variants. Read-through transcription also exists between this gene and the downstream MINDY4 (aka FAM188B) gene. In rodents and other mammals such as cetartiodactyla this gene is in the opposite orientation compared to its orientation in human and other primates and this gene appears to have been lost in carnivora and chiroptera.
Form	25 mM Tris HCl, pH 7.3, 100 mM glycine, 10% glycerol.
