

Active Native Human alpha-Thrombin

Cat. No. Thrombin-23H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Native Human alpha-Thrombin was purified from Plasma.
Species	Human
Source	Plasma
Description	Alpha-thrombin is a highly specific serine protease generated by proteolytic activation of the zymogen prothrombin. During coagulation, thrombin cleaves fibrinogen to form fibrin, leading to the ultimate step in coagulation, the formation of a fibrin clot. Thrombin is also responsible for feedback activation of the procofactors factor V and factor VIII. Thrombin has also been reported to activate factor XIII and platelets, and also functions as a vasoconstrictor protein. The procoagulant activity of thrombin is arrested in two ways: 1) inhibition by either heparin cofactor II or the antithrombin III/heparin complex; or 2) complex formation with thrombomodulin. Formation of the thrombin/thrombomodulin complex results in the inability of thrombin to cleave fibrinogen and activate factors V and VIII, but increases the efficiency of thrombin for activation of the anticoagulant, protein C.
Form	50% glycerol/water (v/v)
Bio-activity	4493 U/mg
Molecular Mass	36700 Da
Purity	>95% by SDS-PAGE

 Tel: 1-631-559-9269 1-516-512-3133

 Email: info@creative-biomart.com  Fax: 1-631-938-8127

 45-1 Ramsey Road, Shirley, NY 11967, USA

Storage	Glycerol formulation: -20°C Hepes formulation: -80°C
----------------	---

Concentration	8.9 mg/mL
----------------------	-----------
