Cat. No. TGFB2-1566H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human TGF- β 2 is a 27.08 kDa protein composed of two identical 118 amino acid polypeptide chains linked by a single disulphide bond.
Species	Human
Source	Nicotiana Benthamiana
Description	Recombinant human TGF- β 2 is a 27.08 kDa protein composed of two identical 118 amino acid peptide chains linked by a single disulphide bond. Transforming growth factor- β is a family of five related cytokines that have been shown on a wide variety of normal and neoplastic cells, indicating the importance of these homo-dimer proteins as multi-functional regulators of cellular activity. The three mammalian isoforms of TGF- β (TGF- β 1, TGF- β 2 and TGF- β 3) signal through the same receptor and elicit similar biological responses. They are involved in physiological processes as embryogenesis, tissue remodelling and wound healing.
Form	Recombinant human TGF-b2 is lyophilized from a Tris HCl 0.05M buffer at pH 7.4.

Purity	>97% by SDS-PAGE gel
Storage	This lyophilized preparation is stable at 2-8o C for short term, long storage it should be kept at -20oC. Reconstituted protein should be stored in working aliquots at –20°C. Repeated freezing and thawing is not recommended.
Reconstitution	Centrifuge vial before opening. Lyophilized protein should be reconstituted in water to a concentration of 25ng/ul. At higher concentration the solubility may be reduced and multimers generated.
