

Active Recombinant Full Length Human STAT4 Protein, His tagged

Cat. No. STAT4-1166H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Active full length recombinant human STAT4 protein with His tag was expressed in Insect Cells.
Species	Human
Source	Insect Cells
ProteinLength	1-748 aa
Description	The protein encoded by this gene is a member of the STAT family of transcription factors. In response to cytokines and growth factors, STAT family members are phosphorylated by the receptor associated kinases, and then form homo- or heterodimers that translocate to the cell nucleus where they act as transcription activators. This protein is essential for mediating responses to IL12 in lymphocytes, and regulating the differentiation of T helper cells. Mutations in this gene may be associated with systemic lupus erythematosus and rheumatoid arthritis. Alternate splicing results in multiple transcript variants that encode the same protein.
Form	The protein is in 20mM Tris-HCl pH7.9, 100mM NaCl, 0.2mM EDTA, 1mM DTT and 20% glycerol.
Molecular Mass	87.8 kDa
