

Active Recombinant Human TATA Box Binding Protein, GST-tagged

Cat. No. TBP-1169H **Lot. No.** (See product label)

SPECIFICATION

Product Overview

Species	Human
Source	E.coli
Description	The TATA-binding protein (TBP) is believed to function as an essential factor of the general transcription machinery and to be involved in transcription by all three eukaryotic RNA Polymerases (Pol I, II, and III). TBP specifically binds to the TATA element at the promoter region and interacts with numerous transcription factors, including TBP-associated factors (TAFs), activators, and some tumor suppressor proteins. Isolated from an <i>E. coli</i> strain that carries the coding sequence for human TBP under the control of T7 promoter. GST-TBP can be used for protein-protein interaction assay.
Usage	For in vitro use only.
Form	Liquid. Supplied in 20 mM Tris-HCl pH 8.0, 100 mM KCl, 0.2 mM EDTA, 1 mM DTT and 20% glycerol.
Activity	100 ng of the protein is sufficient for a protein-protein interaction assay detected by immuno-blot system.
Purity	> 95% by SDS-PAGE.

 45-1 Ramsey Road, Shirley, NY 11967, USA

Storage Quality guaranteed for 12 months, store at -80°C. Avoid freeze / thaw cycles.

GENE INFORMATION

Gene Name TBP TATA box binding protein [Homo sapiens]

Synonyms TBP; TATA box binding protein; GTF2D; SCA17; TFIID; GTF2D1; MGC117320; MGC126054; MGC126055; TATA-box binding protein N-terminal domain; TATA-box factor; TATA-binding factor; TATA sequence-binding protein; Transcription initiation factor TFIID TBP subunit

Gene ID 6908

mRNA Refseq NM_003194

Protein Refseq NP_003185

MIM 600075

UniProt ID P20226V

Chromosome Location 6q27

Pathway Basal transcription factors; Huntington"s disease; Gene Expression; HIV Infection; Transcription

Function general RNA polymerase II transcription factor activity; transcription factor activity
